A morally complex world needs practically engaged ethical leaders.

**THE KENNEDY INSTITUTE OF ETHICS** is a center for practically engaged ethics at Georgetown University. Established in 1971 with a founding interest in medical ethics, it is one of the oldest academic ethics centers in the world. Its founding scholars helped invent the field of **BIOETHICS**, launching a tradition of creative leadership that continues today through cutting-edge research, innovative teaching, and high-impact projects, all driven by a spirit of continuous experimentation.

**TRANSFORMATIVE LEARNING**
Georgetown's mission of educating "men and women for others" with a capacity for "ethics engaged in the real world" makes the KIE a central part of campus intellectual life. We are proud to sponsor learning opportunities at all levels, from high-school students through to graduate students and beyond.

**HIGH-IMPACT PROJECTS**
Our portfolio of projects making a mark at Georgetown and beyond includes a free online course that's educated tens of thousands of global learners, an on-campus event series dedicated to challenging topics in bioethics, an annual showcase of exemplary undergraduate work in ethics, and more.

**CUTTING EDGE RESEARCH**
Our scholars work in areas ranging from health policy and genetic ethics to critical studies of oppression and justice, authoring foundational texts in bioethics and earning numerous awards and grants, including over a dozen lifetime achievement awards. Our Bioethics Research Library is the best in its class.

**INVENTION + EXPERIMENTATION**
Carrying on in the inventive spirit of our Institute’s founders, the KIE is proud to house Ethics Lab, an on-campus incubator for projects that aim to make a complex world more ethical. The Lab is a leader on campus in developing a signature design-driven approach to learning at Georgetown, and a nexus of activity and opportunity for students and alumni.
